To Whom It May Concern,

Kapadi Sp. z o. o. engaged BIOSTAT Sp. z o. o. as an external service provider for a clinical research project conducted on behalf of a Sponsor.

BIOSTAT's responsibilities included electronic data capture, data management and biostatistical services, encompassing the preparation of the Statistical Analysis Plan (SAP), Data Management Plan (DMP) and Data Validation Plan (DVP); development and maintenance of the electronic Case Report Form (eCRF); user training; data cleaning and validation; medical coding; central data review and monitoring; technical support; and preparation of statistical analyses, Tables, Listings and Figures (TLFs), and statistical reports.

The project involved a considerable degree of complexity, with multiple study components requiring separate eCRF configurations, data management activities and statistical deliverables. Combined with the project's duration, this increased the overall workload and required careful coordination and flexibility throughout the collaboration.

BIOSTAT proved to be a reliable and cooperative partner. Communication was efficient and transparent, and the team responded promptly to project needs, provided clarifications and actively participated in identifying practical solutions. Their collaborative approach was particularly valuable in addressing study-specific challenges and adapting to evolving requirements.

Despite the additional effort involved, BIOSTAT remained committed to completing the agreed deliverables and supporting the project through its final stages. The team's expertise in data management and biostatistics, together with its attention to detail and focus on data quality, contributed positively to the successful completion of the project.

Should you require any additional information, please do not hesitate to contact me.

Yours sincerely,
